Fan Air Ltd. relies on Lido/mPilot from Lufthansa Systems

Navigation solution implemented for Ukrainian airline in just two weeks

Raunheim, August 1, 2018 – Lufthansa Systems today announced that it has acquired Fan Air Ltd. as a new customer. The Ukrainian startup airline will use Lido/mPilot from Lufthansa Systems for the next five years. This navigation solution was implemented for the airline in the space of just two weeks after the contract was signed.

“A Ukrainian airline that we have a good relationship with is also using Lido/mPilot and recommended the product to us. We looked at the solution and were immediately impressed by the advantages it offers. Since the implementation, our pilots can access all the necessary navigation maps and documents on their iPads from anywhere, at any time,” said Yakovanko Oleksandr, Chief of Flight Safety Department at Fan Air Ltd.

Lido/mPilot is Lido/Navigation’s charting solution for the iPad. The application contains all important route information, such as altitude data, airways and airport data. The system can access relevant avionics data such as GPS information, speed and the aircraft’s target direction, thus enabling it to display position and orientation of the aircraft on the integrated Airport Moving Map (Lido/AMM).

The Lido charts are generated directly from the certified Lido/FMS navigation database and meet the highest standard of precision and quality. The charting standard was developed by navigation experts in collaboration with pilots, licensed dispatchers and IT specialists. The charts are to-scale and include terrain and topographical data. They also depict true-to-scale topographic information and contain standardized color coding. All these features help to increase pilots’ situation awareness.

Press release

“It normally takes around two months to implement Lido/mPilot. But due to special customer requirements, this had to go faster for Fan Air Ltd., so we implemented the solution in just two weeks,” said Marco Cesa, Senior Vice President Regional Management EMEA at Lufthansa Systems. “We are delighted that we can help this young airline digitally and efficiently control its navigation processes right from the start.”

Fan Air Ltd. was founded at the start of 2018 and is based at Kyiv International Airport (Zhuliany) in Ukraine. The airline operates scheduled flights from Kiev to Greece, as well as charter flights from the Ukraine to Turkey, Montenegro, Albania and Bulgaria.
