Lufthansa Systems and Emirates Airline extend their long-standing partnership for another seven years

Dubai-based carrier signs contract for Lido Pilot Solutions and Lido Data Solutions

Raunheim, April 8, 2021 – Lufthansa Systems and Emirates Airline have extended their long-standing partnership by signing a seven-year contract for the iPadOS-based charting solution for pilots Lido mPilot – including the Airport Moving Map Lido AMM – and the renewal for the Airport Mapping Database Lido AMDB. The airline and its pilots will continue to benefit from increased situational awareness, safety, efficiency, and a reduction in workload.

“We are happy to continuously support our airline customers with our cutting-edge products and services – especially as flights are slowly starting to pick up again around the world,” said Dr. Bernd Jurisch, Head of Flight & Navigation Products & Solutions at Lufthansa Systems. “This contract extension highlights the ongoing trust our customers place in us as a leading provider of aviation IT solutions, and we look forward to continuing our long-standing partnership with Emirates.”

Emirates is one of the world’s leading airlines, and it first started using the Lido Flight Planning Solutions in 1996. The airline became an early adopter of the Windows-based charting application Lido eRoute Manual in 2008, and it has now opted to include the iPadOS-based charting application Lido mPilot as part of its flight operations solutions suite. This application optimizes workflows for pilots and improves their situational awareness, and most recently, it introduced a built-in dark mode button, a terrain layer on the enroute map, and the depiction of five weather phenomena.

Lido mPilot provides pilots with all necessary navigation charts, documents and messages on their iPads. The application boasts an intuitive user interface, data visualized using the acclaimed Lido Route Manual charting standard, enroute weather and terrain, and more than thirty user configurations. The Lido AMDB is a highly accurate and reliable airport mapping database developed by Lufthansa Systems. The certified database displays the spatial

layouts of airports in a geo-referenced manner to enable the onboard EFB airport moving map application and advanced ground avionics functions. It includes the geometry of runways, taxiways and buildings, as well as functional information.

The Lido Flight Operations Solutions product family from Lufthansa Systems offers the aviation industry products and services in three key areas: Lido Data Solutions, Lido Flight Planning Solutions, and Lido Pilot Solutions. With its Lido products, Lufthansa Systems helps its customers increase safety, lower costs, and reduce workloads across the entire mission – both on the ground and in the air.
