Lufthansa Systems and Aerolíneas Argentinas extend partnership for Lido Flight 4D, NetLine/Load extended to NetLine/Load RampMobile Solution

- Aerolíneas Argentinas renews contracts for Lido Flight 4D, NetLine/Load and adds NetLine/Load RampMobile Solution
- Lido Flight 4D optimizes the route while taking current flight-related data into account
- NetLine/Load maximizes efficiencies through advanced load planning

Raunheim, 09th May 2023. Lufthansa Systems announced that the Argentinian airline Aerolíneas Argentinas has renewed its partnership with Lufthansa Systems by extending the contract for Lido Flight 4D and for NetLine/Load. Additionally the newly contracted RampMobile Solution gives the implemented NetLine/Load application a new workflow and collaboration perspective.

Lido Flight 4D is a highly effective flight planning tool that enables airline dispatchers to evaluate optimal flight routes, considering current flight-related data such as fuel consumption, costs, and flying time. It allows for individual optimization of flight phases and offers a range of automation options, from fully manual to fully automatic. The solution is equipped with advanced features such as real-time data updates, weather data integration, and fuel price updates, providing accurate and up-to-date flight plans.

NetLine/Load consolidates all load parameters including regulations, technical aircraft data, passengers, baggage and cargo, operational schedule and flight planning information in order to increase productivity, improve turnaround-time and maximize fuel efficiency. Furthermore, it optimizes load distribution to achieve the best center of gravity, maximizing aircraft-fuel efficiency. The additional module NetLine/Load RampMobile supports ramp staff by simplifying the load control workflow. Ramp agents can update the core weight and balance system directly from the apron, resulting in a paperless, more efficient and less error-prone load control process.

“Our confidence in the Lufthansa Systems family remains strong and keeps growing with time, so we are pleased to extend our partnership. Having already worked with Lido Flight 4D and NetLine/Load in the past, we know the quality they add to our daily work, increasing our efficiency and reliability, which is crucial in this industry.” said Matias Pablo Larumbe, Flight Dispatch Manager and Captain of Aerolíneas Argentinas

“We are looking forward to continue working alongside our valued customer, Aerolíneas Argentinas, and thus maintaining our position in South America. This partnership highlights the ongoing trust our customers place in us as a leading provider of aviation IT-solutions”, added Genaro Zarazua, CEO of Lufthansa Systems North and South America.
