Flightradar24 chooses Lufthansa Systems' Lido Sky Data as basis for flight tracking services

- Flightradar24 relies on Lido Sky Data from Lufthansa Systems to provide flight tracking services in real time
- Lido Sky Data was chosen for its high data quality
- Lido solutions available for markets similar to the airline industry

Raunheim, 16th May 2023. Lufthansa Systems announced that Flightradar24 opted for Lido Sky Data as a basis for their global flight tracking services. After running various tests with different providers in the market, Flightradar24 chose Lufthansa Systems because of their high data quality.

Lufthansa Systems' Lido Sky Data offers aeronautical navigation data with worldwide coverage. Flightradar24 will benefit from this standardized and up-to-date high quality aeronautical dataset, which consists of many different features such as airports, runways, waypoints and airways. For Flightradar24 the worldwide coverage is key for implementing the solution.

Flightradar24 is a well-known flight tracking provider and a leader in the data industry. It provides real-time information about more than 200.000 aircrafts around the world every day. Its services are not only being used by plane spotters or businesses in the aviation industry but are made available to everyone. In total, Flightradar24 has over 40 million users per month and is the most popular flight tracking app worldwide.

“We are very happy to be partnering with Lufthansa Systems. Basing our flight tracking services on high quality and up-to-date navigation data is crucial for our services and our users. After extensive benchmarking, we are convinced that Lido Sky Data is the right choice for us to be able to keep providing our users with the most accurate flight tracking and thus the best user experience”, said Lasse Schmidt Westrén, Strategical Partnership Manager at Flightradar24.

“We are pleased to partner with such a well-known company like Flightradar24. It shows the large variety of use cases of Lido Sky Data outside the traditional aircraft avionics systems, like flight tracking and planning, route analysis, air traffic management, advanced air mobility and many more.”, added Jennie Cheng, Business Development Manager at Lufthansa Systems.
