FitsAir increases efficiency with Lufthansa Systems

Raunheim, 4th April 2024. FitsAir relies on Lufthansa Systems' pilot navigation solution Lido mPilot and their navigational data solution Lido FMS to increase their pilot's efficiency and to reduce current costs. Convinced by Lido mPilot's high data quality and state-of-the-art features, the Sri Lankan carrier decided to start their partnership with Lufthansa Systems. With this new collaboration and the already existing cooperation with Sri Lankan Airlines Lufthansa Systems became the only provider of navigation solutions in Sri Lanka.

Designed for airline use, Lido mPilot enhances pilot situational awareness, enabling them to focus on safe and efficient aircraft operations. It streamlines flight navigation by providing seamless access to terminal charts, dynamically generated enroute maps, an Airport Moving Map (AMM), and operational documents on their iPad. Lido mPilot helps FitsAir's pilots to streamline their workflows for more efficiency. The charting solution seamlessly integrates with modern airline workflows, reducing pilot information overload and elevating pertinent flight data based on aircraft location and flight plan.

Lido FMS provides FitsAir with the highest quality, complete, certified aeronautical data with worldwide coverage for their flight management system. Approved for onboard navigation, the solution enhances flight safety and reduces the crew's workload.

"We are very happy to be partnering with Lufthansa Systems. For us trust is the foundation of our partnership. Thanks to their world class support we can trust that Lufthansa Systems' solutions will enhance our workflows and help us become more efficient so that we can provide our customers with right cost air travel", stated Captain Ruwan Vithanage, Chief Pilot A320 at FitsAir.
