SmartLynx ensures smooth daily operations with Lido mPilot

Raunheim, 28th June 2024. Lufthansa Systems announced that SmartLynx Airlines, a globally acknowledged Aircraft, Crew, Maintenance and Insurance (ACMI), cargo, and charter provider, has signed a cooperation agreement to use their mobile charting application Lido mPilot. SmartLynx transitioned to Lufthansa Systems for their superior data quality and user-friendly interface, aiming to improve operational efficiency.

Lido mPilot equips pilots with a comprehensive navigation solution by directly providing seamless access to all necessary charts like terminal charts or dynamically generated enroute maps, operational documents, and messages on their devices. Lido mPilot ensures that flight-relevant information is always accessible, allowing pilots to concentrate on safe and efficient aircraft operations. The charting solution seamlessly integrates with modern airline workflows, reducing pilot information overload and elevating pertinent flight data based on aircraft location and flight plan.

“It is crucial for our business to have efficient tools to ensure smooth daily operations. In flight operations, we do not settle with how we did business yesterday but are constantly looking for improvement opportunities, that on one side add value to our business and on the other side add functionality for the end users. Apps used in the flight deck must be intuitive and well-designed. With Lido mPilot, we can access relevant, precise, and timely information, which is critical for our operations,” stated Lasse Bay Hansen, Groupe Director of Flight Operations at SmartLynx.
