HeliEFB chooses Lido Sky Data for high data quality

Raunheim, 15th August 2024. Lufthansa Systems announced that HeliEFB, a German and US-based company that provides an all-in-one EFB app for helicopters, has signed a contract to use Lido Sky Data for their Flight Planning offer. This development marks a significant milestone for Lufthansa Systems, as the company continues to expand its Lido suite beyond the airline industry. By entering this new segment, Lufthansa Systems is broadening its reach, having previously utilized Lido FMS primarily in helicopter simulators.

Lido Sky Data offers navigational data for various systems and applications and supports customers in the automation and digitalization of labor-intensive and potentially error-prone manual processes, for instance, in flight planning. Lido Sky Data includes worldwide standardized navigation information such as airports, heliports, runways, waypoints, nav aids, airspaces, airways, and terminal area procedures. The data is updated according to the AIRAC cycle and is in line with ARINC 424 and various other industry standards, such as the RTCA DO-200 and DO-201. The data provided by Lufthansa Systems has been widely used in the aviation industry for more than 20 years.

“We have decided to work with Lufthansa Systems and use Lido Sky Data because of the high quality of the data. This will enhance the flight planning offering in our solution. Our customers, like Helicopter Emergency Medical Services, need the best data they can get to execute their missions and save lives,” said Markus Siebert, CEO HeliEFB.
