Bamboo Airways elevates its flight navigation

Raunheim, 29th January 2025. The Vietnamese airline Bamboo Airways opted for the pilot navigation solution Lido mPilot from Lufthansa Systems because of its advanced features and exceptional data quality. With Lido mPilot, Bamboo Airways can enhance pilot efficiency and improve flight operations.

Lido mPilot brings effortless airport navigation, simplifying pre-flight routines and integrating advanced weather forecasting directly into the platform. It streamlines flight navigation by providing seamless access to terminal charts, dynamically generated enroute maps, an Airport Moving Map (AMM), and operational documents on their iPad. Pilots can easily overlay essential company-specific data onto their maps, ensuring complete situational awareness at every stage of the flight. The charting solution seamlessly integrates with modern airline workflows, reducing pilot information overload and elevating pertinent flight data based on aircraft location and flight plan.

“With Lido mPilot, we can raise flight navigation to new heights,” said Vu Phong Nguyen, Director of OCC at Bamboo Airways. “Lufthansa Systems has proven their expertise for 30 years. Its navigation solution provides real-time insights and will allow us to enhance our pilots’ workflows – a key step toward offering an even more comfortable travel experience and elevated journey for our passengers.”
