

High quality & complete aeronautical database

Lido FMS

Precise in-flight navigation data is fundamental to flight safety.

Lido FMS provides you with the highest quality, certified aeronautical data with worldwide coverage, tailored to your aircraft types, your hardware, and your route network.

Using the onboard flight management system, pilots can access flight-relevant information at all times and plan their routes accordingly.

Our comprehensive navigation database, containing all relevant aeronautical data, forms the basis of Lido FMS.

In compliance with the regulations of AIRAC (Aeronautical Information Regulation and Control), the customer receives updated FMS databases every 28 days, which can be uploaded to the onboard flight management computer easily and quickly.

Lido FMS provides the foundation for many other Lido solutions, offering consistent information to the end user.
