Malaysia Airlines enhances operational efficiency with Lido Flight 4D Integrated Flight Support

Raunheim, 06th May 2025. Lufthansa Systems is further strengthening its collaboration with Malaysia Airlines as the airline has become an early adopter of Lido Flight 4D Integrated Flight Support (IFS). Having joined the Lido Flight family in 2022, Malaysia Airlines expressed interest in IFS just a year later – an early commitment that underscores its forward-thinking approach to digital flight operations.

Lido Flight 4D IFS integrates flight planning and monitoring into a single, intuitive system, automating repetitive tasks and improving situational awareness for dispatchers, which ensures smoother workflows. While providing a clear overview of flight status, exceptions, and alerts, the system's seamless data integration enables airlines to optimize their operations and react more effectively to dynamic conditions.

“At Malaysia Airlines, we are constantly looking for ways to optimize our flight operations and enhance efficiency,” said Captain Nasaruddin A. Bakar, Chief Operating Officer of Malaysia Airlines. “Being an early adopter of Lido Flight 4D IFS allows us to take a bold step forward in this journey. Since Mid-March, we have been using the system to plan all our domestic flights and have found it to be a valuable tool in enhancing our operations.”

With Malaysia Airlines joining the group of early adopters, Lufthansa Systems continues to expand the global reach of Lido Flight 4D IFS. Several airlines are already using the solution, primarily for domestic short-haul operations, where it has demonstrated clear advantages. More airlines will follow during this year, which is further driving the evolution of digital flight support solutions in the aviation industry.
