

Lido FMS

High quality & complete aeronautical database.

Trusted accuracy in every flight

Accurate in-flight navigation data is essential to flight safety—and Lido FMS delivers it with unmatched quality and reliability. Our certified aeronautical database offers worldwide coverage, tailored to your aircraft types, onboard systems, and route network.

Flight-critical data when you need it

Through your aircraft's Flight Management System, pilots have continuous access to up-to-date, flight-relevant information—before departure and throughout the journey. This enables better planning, faster decision-making, and increased operational confidence, even in challenging conditions.

Always up-to-date

Our navigation database is maintained in strict accordance with AIRAC (Aeronautical Information Regulation and Control) standards. Every 28 days, you receive the latest data—ready to upload to your onboard flight management computer in just minutes. No downtime. No delays. Just seamless updates for uninterrupted safety and performance.

The foundation for many Lido Solutions

Lido FMS forms a consistent data platform used by many of our products. By aligning information where it matters most, it reduces errors, streamlines workflows, and enhances operational performance.

Key benefits & features

Global navigation data coverage

- Complete navigation data for more than 35,000 aerodromes worldwide.

Flexible tailoring solution

- Multiple customization options to match your fleet, systems, and operations.

Seamless integration

- Forms the foundation for many other Lido solutions, offering consistent information for the end user.

EASA certified

- Fulfills all relevant industry standards and is certified according to EASA Service Provider Certificate Type 1.

World-class customer support

- 24/7 access to our expert customer service and industry leading navigation data knowhow.
