

Lido mBriefing

Paperless briefing. Seamlessly integrated. Effortlessly intuitive.

Seamless access to flight information

Lido mBriefing is an integrated, paperless pilot briefing solution for iOS that delivers all relevant flight information across every phase of flight in a single, intuitive mobile experience.

By seamlessly connecting dispatch, briefing, and cockpit workflows, it enables informed decision-making, improves operational efficiency, and ensures continuous access to critical data—even offline. The solution strengthens collaboration between flight crews and operations while supporting compliance and auditability requirements.

Connected crews, smarter operations

Lido mBriefing combines flight preparation and briefing, real-time operational updates both pre- and inflight and paperless documentation into a unified workflow tightly integrated with Lido Flight 4D and the Lido ecosystem. Pilots receive structured flight information packages with real-time updates reinforced by push notifications, enhancing situational awareness and reducing the risk of missed updates, plus access to key documentation such as Nav- and JourneyLog. Offline capability ensures operational continuity, while integrated synchronization, sharing and quick access features improve crew coordination and usability.

Continuous and aligned development within the Lido ecosystem ensures increasingly faster information access, reduced workload, improved data quality, and greater transparency between dispatch and flight crews.

Key benefits & features

Seamless end-to-end integration

Integration with Lido Flight 4D, Lido mPilot and options for external airline systems for a seamless and fully connected EFB ecosystem.

Enhanced operational awareness

Real-time visibility of briefing information is shared between dispatch and crew. Push updates help ensure critical updates are not missed and remain accessible throughout the operation.

Reliable across all flight phases

Uninterrupted access to flight plan and briefing package information – online and offline.

Enhancing operational efficiency

Enables real-time inflight optimization and access to inflight flight plans for improved fuel efficiency and decision-making.

True paperless

End-to-end digital processes cover signatures, document annotations, user attachments, and operational feedback, removing the need for paper across pre- and postflight activities.

Pilot centric design

Interface is aligned with pilot workflows for fast and intuitive information access.
